

Low Carbon Proposals for Phase A Woolaway redevelopment site

Before and after illustrated summary of the previously constructed homes and proposed new build properties.

Somerset West
and Taunton

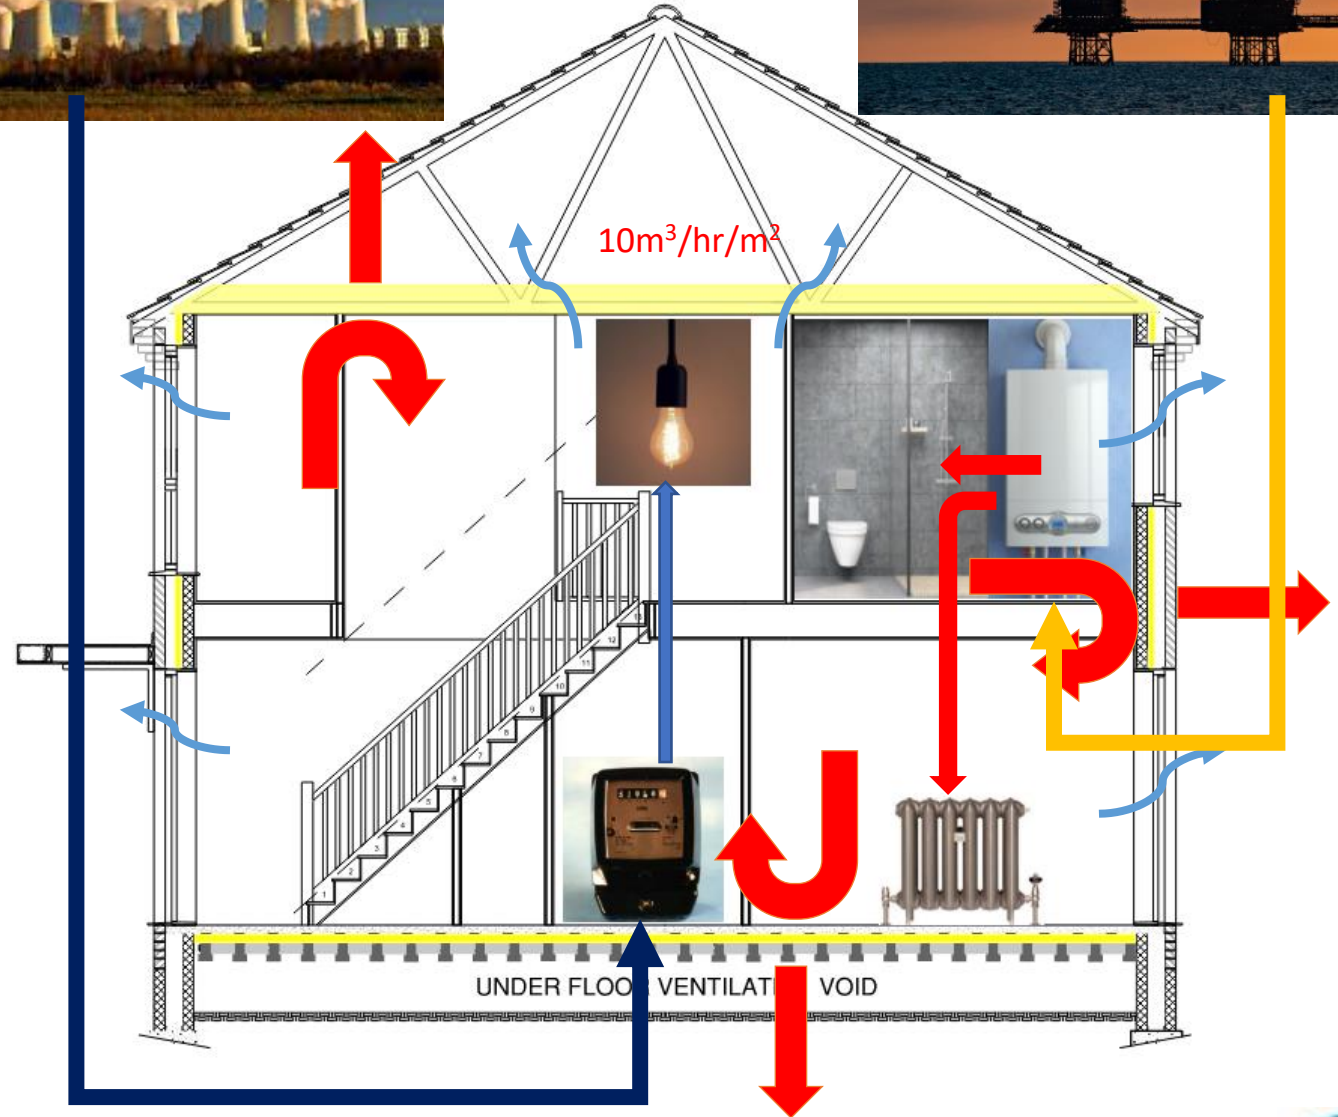

ENGIE

Cross section through a typical house built in the last 20 – 30 years.

In Summary

- Not insulated sufficiently
- Use of standard installations to heat, ventilate and power the homes resulting in
- High energy bills for the residents
- Increasing Carbon emissions

Cross section through a typical new house in Taunton

In Summary

- Highly insulated buildings
- Use of modern installations to heat, ventilate and power the homes resulting in
- Low energy bills for the residents
- Lowering Carbon emissions from the council housing stock
